Dear Dr Sivakumar N,

I am Naveen Prasath M (Batch of 2023), writing to share my reflections and express my sincere gratitude for the role the department played in my development.

My time here provided me with a strong and practical foundation. This was especially true during my final year project on buried pipe deformation. The project relied heavily on the department's excellent geotechnical lab facilities, which were vital in allowing me to conduct meaningful, hands-on research. That experience honed my analytical and problem-solving skills in a way that pure theory never could.

I would especially like to thank you, our HOD, for creating a supportive and rigorous academic environment. We were ready for challenges in the real world because of the faculty's commitment to going above and beyond the curriculum.

I can use the methodical, organised thinking I acquired here in my current job. This is the same method I use as an Assistant System Engineer at TCS to manage critical release deployments for a large client and troubleshoot production issues in Azure SQL databases. Every day, I employ the discipline of thoroughly validating results, which is a fundamental tenet of our engineering labs, to guarantee system stability and efficiently address user concerns.

I am grateful that you have given me the mindset of a true engineer.

Sincerely,

Naveen Prasath M
Batch of 2023, Civil Engineering
